Design, Technology & Digital Solutions

CORE FOCUS

Design & Creative Solutions

Design is treated not only as a visual element, but as an important part of how users understand, interact with, and experience a product.

Information Technology

The company develops and manages technology solutions designed to support business processes, operational requirements, and digital transformation.

Digital Product Development

PT. Well Tech Solutama is developing its capabilities as a digital product studio, focusing on the development of software and applications that address specific market and operational needs.

Well Done Studio is the brand of **PT Well Tech Solutama**, operating across technology and creative design. The company functions as a software house and digital product studio, delivering solutions to support the digital transformation needs of both the Group's internal businesses and the external commercial market.

The studio focuses on transforming ideas, business requirements, and operational challenges into practical digital solutions that are functional, accessible, and relevant to the evolving needs of businesses.

Developing Solutions for MSMEs

The initiative is designed around a simple premise: many MSMEs require better digital tools to manage their businesses, but often face limitations in terms of cost, complexity, technical knowledge, and access to suitable software.

As a One-Stop Supplier, PT. Tripanca Multiparts Solutama provide comprehensive procurement solutions for truck and heavy equipment spare parts, helping our customers maintain operational efficiency while minimizing downtime. at competitive prices.

Clean energy, biomass development, and eco-friendly energy solutions.

PT. Tripanca Sentosa Energi focuses on developing sustainable energy solutions through clean energy initiatives, biomass-based commodities, and the responsible utilization of energy waste. The company aims to support the transition toward a more sustainable energy ecosystem by developing resources into valuable, environmentally responsible, and commercially viable solutions.

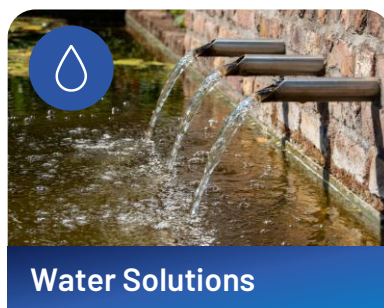

BUSINESS SECTORS

Renewable Energy

Activities include the development of energy solutions, resource utilization, and initiatives that contribute to reducing reliance on conventional energy sources.

Water Solutions

Activities include the development of energy solutions, resource utilization, and initiatives that contribute to reducing reliance on conventional energy sources.

Biomass Energy

Utilize biomass resources as an alternative and renewable source of energy. By converting organic materials and biomass-based resources into usable energy and commodities.

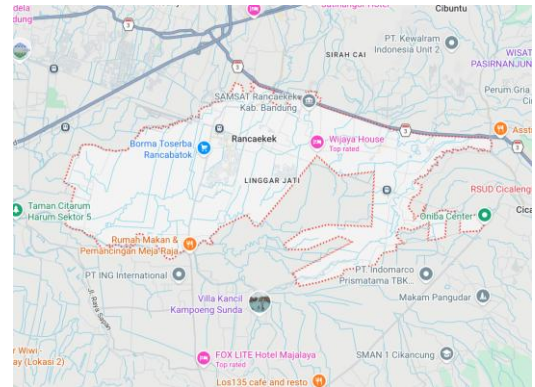

CURRENTS PROJECTS

Rancaekek Water Resource Revitalization Project

Location: **Rancaekek, Bandung, West Java**

The Rancaekek project focuses on the revitalization of water resources, with the objective of improving the utilization and functionality of existing water resources through an appropriate technological and infrastructure approach.

The development focuses on how existing water resources can be better utilized, managed, and supported through revitalization efforts.

■ Rancaekek administrative district

Project Focus

- Water resource revitalization
- Improvement of water resource utilization
- Resource management and infrastructure
- Sustainable water solutions
- Technology-supported water resource development

CURRENTS PROJECTS

Pagerungan Seawater Treatment Project

Location: **Pagerungan, Sapeken District, Sumenep Regency, East Java**

The Pagerungan project focuses on the development and application of seawater treatment technology, specifically through a machine/system designed to process seawater into water suitable for drinking.

The project addresses one of the fundamental challenges faced by communities and locations surrounded by abundant seawater but with limited access to freshwater resources.

By converting seawater into potable-quality water, the project explores the potential of technology to transform an abundant natural resource into a usable and reliable water source.

■ Pagerungan, Sapeken District

Project Focus

- Seawater treatment
- Freshwater production
- Potable water technology
- Water accessibility
- Sustainable resource utilization
- Technology for remote and water-constrained environments

KEY PERSONNEL

Jonathan Tri Sakiman
